**REDUCE COSTS AND INCREASE SECURITY**

Unlike disposable packaging, reusable shipping containers are an

investment not a monthly expense. Once purchased they are not prone to yearly price increases, supply problems, or disposal costs.

Our reusable shipping containers are the ideal replacement for costly one way disposable containers in your inter-plant shipping operation.

Polyethylene containers are lighter than wood or steel, stronger than cardboard and provide the highest degree of moisture resistance. Molded-in pallet base eliminates the need for wood pallets and will accommodate forklift

or pallet jack handling. Designed and constructed to perform in the harshest working environments. Ted Thorsen forkliftable bulk containers are adaptable to any industry.

They provide more efficient handling and storage of raw materials, increased security for your interplant shipments and improved distribution of your finished products.
